

Profile

- Localization and AI prompt practitioner with hands-on experience in Chinese user-facing content, LBS/local-life recommendation, POI and merchant semantics, and GPT-based prompt workflows.
- Strong fit for Simplified Chinese localization prompt creation: able to convert English source intent into concise, natural Chinese instructions, specify tone/formality/grammar constraints, and flag cultural risks, idioms, edge cases, and hallucination-prone outputs.
- Tourism-adjacent domain exposure through Dianping/Meituan food, hotel-like merchant discovery, location intent, distance-aware ranking, store visit conversion, and customer decision journeys.

Relevant Experience

Meituan – Machine Learning Engineer, Personalization & Recommendation Jul 2025 – Present

- **Localized customer-facing recommendation copy:** Built an LLM-assisted pipeline for personalized merchant recommendation reasons in Dianping. Transformed search, click, transaction, review/note, and location behaviors into structured user context, then used prompt constraints to generate concise Chinese copy that connects user preference with verifiable merchant facts.
- **Prompt design and output quality control:** Wrote prompt rules to preserve source semantics, control length, avoid over-claiming, reduce templated language, and keep generated reasons aligned with UI/UX needs. Added signal filters and evidence checks so outputs remained natural, helpful, and grounded in source data.
- **Travel/local-life terminology and user intent:** Worked with POI, merchant category, distance, city, search keyword, visit, order, and review-derived attributes to understand how users choose restaurants, nearby places, and destination-specific services. Supported recommendation scenarios where location, accessibility, quality, price/value, and recent intent all affect customer decisions.
- **Cultural nuance and tone adaptation:** Modeled Chinese consumer decision signals such as nearby convenience, mealtime/nighttime demand, group dining, active search intent, and offline visit context. Tuned recommendation logic and copy inputs to avoid irrelevant suggestions and improve empathy for different city/supply/user segments.
- **Evaluation and risk awareness:** Used A/B metrics and qualitative checks to evaluate output usefulness and behavioral impact, including visit-purchase rate, intent rate, UV_CTR, store visits, and low-quality exposure. Paid particular attention to edge cases such as sparse user history, low-supply cities, delayed conversion, misleading distance signals, and factual inconsistency in generated text.
- **Business impact:** Contributed to food recommendation improvements by expanding cross-scenario behavioral signals, search intent, Meituan-side transaction signals, mini-program/SaaS-side visit signals, and distance-aware supply strategies; lifted visit-purchase rate, intent rate, merchant UV_CTR, and total store visits.

Guoyuan Securities Co., Ltd. – AI Engineer, LLM Applications Aug 2023 – Oct 2023

- **Chinese knowledge Q&A assistant:** Built an RAG-based internal Q&A prototype for employee information, floor locations, policies, procedures, and reimbursement standards. Converted Word/PDF/Excel/CSV sources into structured Markdown while preserving hierarchy, policy versions, contacts, and monetary details.
- **Instruction writing and grounded generation:** Implemented retrieval, context assembly, and constrained prompts for Chinese answers to high-frequency user queries. Focused on clarity, factual consistency, concise wording, and safe handling of policy-sensitive details.

Localization & Prompt Creation Fit

- **Language pair and style:** Native Simplified Chinese user and fluent English reader; comfortable adapting English source meaning into natural, concise Chinese while specifying formality level, grammar preferences, terminology choices, and UI-friendly phrasing.
- **Prompt deliverables:** Able to write language-specific instructions, localized prompt variants, two example outputs per target language, evaluation notes, and risk/edge-case summaries for reviewers and downstream model testing.
- **Customer obsession:** Experienced in recommendation systems where wording must help users make quick local decisions. Prioritize traveler needs such as clarity, trust, location relevance, itinerary context, opening-time/distance sensitivity, and avoiding culturally awkward or overly literal translations.
- **Tourism and hotel relevance:** Familiar with location-specific terminology and traveler-adjacent scenarios, including POIs, nearby services, merchant categories, reviews, city context, transportation/distance constraints, booking-like decision factors, amenities, and destination discovery.

Education

- **University of Science and Technology of China**
M.S., Information and Communication Engineering Sep 2022 – Jun 2025
Awards: First-Class Academic Scholarship (3 times); Outstanding Summer Camp Volunteer.
Publications: First author on IEEE TIP (CCF-A); third author on IEEE ICASSP 2025 and IEEE ICME 2025.
- **Northeastern University**
B.S., Electronic Information Engineering Sep 2018 – Jun 2022
Rank: 2/60 **GPA:** 4.11/5.0 **CET-4:** 564 **CET-6:** 568
Honors: University Outstanding Student; Jianlong Scholarship; First-Class Scholarship; Yao Tianshun Scholarship; Outstanding Student; Second-Class Scholarship.

Skills

- **Localization & Writing:** Simplified Chinese localization, EN-to-ZH adaptation, customer-facing microcopy, tone and formality guidelines, terminology consistency, cultural nuance, idiom handling, risk and edge-case review.
- **AI & Prompting:** Prompt design, GPT-based systems, RAG, LangChain, grounded generation, hallucination mitigation, output evaluation, AI-assisted content workflows.
- **Domain & Technical:** Travel/local-life POI terminology, LBS recommendation, search intent, reviews, merchant attributes, Python, SQL, C++, Linux, PyTorch, TensorFlow, A/B analysis.
